Q2 2026

RESEARCH CATEGORIES

5 Categories · 36 Compounds · Organized by Mechanism of Action

Tissue Research 9 SKUs

Peptides studied for structural repair, mucosal protection, anti-inflammatory signaling, and extracellular matrix remodeling.

BPC-157

TB-500

KPV

GHK-Cu

Endocrine Research 10 SKUs

Peptides studied for growth hormone secretion, gonadotropin signaling, melanocortin receptor activity, and hormonal regulation.

CJC-1295

Ipamorelin

KissPeptin

PT-141

Melanotan II

Cellular Research 6 SKUs

Peptides studied for telomerase activation, mitochondrial signaling, and NAD+ metabolic pathways in cellular energy and longevity.

Epithalon

MOTS-C

NAD+

Neural Research 3 SKUs

Peptides studied for anxiolytic, nootropic, and sleep-related neuropeptide activity in central nervous system models.

Selank

Semax

DSIP

Metabolic Research 8 SKUs

Peptides studied for GLP-1/GLP-2/GLP-3 receptor activity, lipolytic signaling, and metabolic homeostasis.

AOD-9604

GLP-3 (R)

GLP-2 (T)

GLP-1 (S)

● TISSUE

NUL-V-BPT-10

Wolverine Blend

10mg BPC-157 · 10mg TB-500

20mg Lyophilized · ≥99% HPLC

The most popular tissue repair stack in one vial. BPC-157 is a gut-derived peptide studied for healing tendons, joints, and gut lining. TB-500 is a protein fragment that helps mobilize stem cells and reduce inflammation throughout the body. Together, they cover the broadest range of recovery research.

● TISSUE **NEW**

NUL-V-GLW-70

Glow Blend

50mg GHK-Cu · 10mg BPC-157 · 10mg TB-500

70mg Lyophilized · ≥99% HPLC

The most comprehensive tissue and skin repair blend — GHK-Cu for collagen stimulation and skin remodeling, combined with BPC-157 for targeted tissue healing and TB-500 for systemic recovery support. Ideal for researchers studying multi-pathway regeneration protocols.

● TISSUE **NEW**

NUL-V-KLW-80

Klow Blend

50mg GHK-Cu · 10mg BPC-157 · 10mg TB-500 · 10mg KPV

80mg Lyophilized · ≥99% HPLC

The complete four-compound tissue stack — combining GHK-Cu's regenerative properties, BPC-157's targeted repair, TB-500's systemic recovery, and KPV's precision anti-inflammatory action. Designed for broad-spectrum tissue and inflammatory research protocols.

● TISSUE

NUL-V-BPC-10

BPC-157**10mg** Lyophilized · ≥99% HPLC

Short for Body Protection Compound-157 — a peptide originally found in stomach fluid with one of the highest citation counts in tissue repair research. Studied for healing tendons and ligaments, protecting the gut lining, promoting new blood vessel growth, and reducing whole-body inflammation.

● TISSUE

NUL-V-BPC-20

BPC-157**20mg** Lyophilized · ≥99% HPLC

BPC-157 at double concentration — same compound, twice the amount per vial. Preferred for multi-subject studies, longer research timelines, or customers sourcing in bulk. Best-selling tissue SKU by volume.

● TISSUE

NUL-V-GHK-50

GHK-Cu**50mg** Lyophilized · ≥99% HPLC

GHK-Cu (copper peptide) is one of the most studied peptides for skin and tissue remodeling. It naturally occurs in human plasma and declines with age. Research focuses on its ability to stimulate collagen and elastin production, accelerate wound closure, and reduce chronic inflammation.

● TISSUE

NUL-V-KPV-05

KPV**5mg** Lyophilized · ≥99% HPLC

A three-amino-acid fragment derived from alpha-MSH, a hormone naturally produced in the brain. Studied for switching off inflammatory signals in the gut and skin — with research interest in conditions like IBD (inflammatory bowel disease), dermatitis, and wound recovery.

● TISSUE

NUL-V-KPV-10

KPV**10mg** Lyophilized · ≥99% HPLC

KPV at double concentration for dose-escalation studies or extended protocols. Same powerful anti-inflammatory profile — more compound per vial for researchers running longer timelines or higher-volume experiments.

● TISSUE

NUL-V-TB5-10

TB-500**10mg** Lyophilized · ≥99% HPLC

Thymosin Beta-4 fragment — a naturally occurring protein that helps regulate how the body repairs damaged tissue. Studied for speeding muscle recovery, reducing scar formation, lowering inflammation, and supporting heart tissue repair after injury.

● ENDOCRINE **NEW**

NUL-V-CJI-10

CJC-1295 + Ipamorelin Blend**5mg CJC-1295 · 5mg Ipamorelin****10mg** Lyophilized · ≥99% HPLC

The gold-standard growth hormone secretagogue combination in a single vial. CJC-1295 amplifies the pituitary signal for GH release while Ipamorelin selectively triggers the response — together producing synergistic GH output that exceeds either compound alone.

● ENDOCRINE

NUL-V-CJC-05

CJC-1295 (No-DAC)**5mg** Lyophilized · ≥99% HPLC

A modified version of the brain signal that triggers natural growth hormone production. The "No-DAC" version produces short growth hormone pulses that mimic the body's own rhythm, rather than causing continuously elevated levels. Widely used in longevity, body composition, and recovery research.

● ENDOCRINE

NUL-V-CJC-10

CJC-1295 (No-DAC)**10mg** Lyophilized · ≥99% HPLC

CJC-1295 No-DAC at double concentration — preferred for extended study duration or use alongside Ipamorelin. The two compounds are frequently combined because they work on different steps in the same growth hormone release pathway, producing a stronger combined effect.

● ENDOCRINE

NUL-V-IPA-05

Ipamorelin**5mg** Lyophilized · ≥99% HPLC

A selective growth hormone releaser — it triggers the pituitary gland to release growth hormone without raising cortisol (the stress hormone) or prolactin. That clean hormonal profile makes it one of the most widely researched growth hormone compounds. Frequently paired with CJC-1295.

● ENDOCRINE

NUL-V-IPA-10

Ipamorelin**10mg** Lyophilized · ≥99% HPLC

Ipamorelin at double concentration for extended study duration or higher throughput. Best-seller among endocrine research SKUs — consistently high reorder rate from clinics, wellness centers, and research organizations.

● ENDOCRINE

NUL-V-KIS-05

KissPeptin**5mg** Lyophilized · ≥99% HPLC

KissPeptin is the master switch for the reproductive hormone system. It signals the brain to release the hormone that controls testosterone, estrogen, and fertility hormones downstream. Research covers fertility support, hormone cycle regulation, and puberty-related endocrinology.

● ENDOCRINE

NUL-V-KIS-10

KissPeptin**10mg** Lyophilized · ≥99% HPLC

KissPeptin at double concentration for extended reproductive endocrinology protocols or higher-volume fertility research. Growing demand from fertility clinics and academic endocrinology labs.

● ENDOCRINE

NUL-V-MEL-10

Melanotan II**10mg** Lyophilized · ≥99% HPLC

Melanotan II activates melanocortin receptors throughout the body — the same system that controls skin pigmentation, appetite, and sexual response. Studied for tanning response without UV exposure, appetite suppression, and sexual function.

● ENDOCRINE

NUL-V-PT1-05

PT-141**5mg** Lyophilized · ≥99% HPLC

Also known as Bremelanotide — PT-141 works through the brain's melanocortin receptors to influence sexual arousal and desire. Unlike most compounds in this space, it acts on the central nervous system rather than on blood vessels.

● ENDOCRINE **NEW**

NUL-V-PT1-10

PT-141**10mg** Lyophilized · ≥99% HPLC

PT-141 at double concentration for extended sexual health research protocols or higher-volume studies. Works through the brain's melanocortin receptors — a central nervous system mechanism distinct from vascular approaches like PDE5 inhibitors.

● CELLULAR

NUL-V-EPI-10

Epithalon**10mg** Lyophilized · ≥99% HPLC

Epithalon is a synthetic version of a peptide produced by the pineal gland. The most-cited peptide in longevity research, studied for activating the enzyme that rebuilds chromosome tips (which shorten with age), improving sleep quality, and slowing cellular aging markers.

● CELLULAR

NUL-V-EPI-30

Epithalon**30mg** Lyophilized · ≥99% HPLC

Epithalon at 3x concentration — the most cost-effective format for extended longevity protocols or research requiring multiple dosing sessions. Strong reorder demand from anti-aging clinics and academic longevity labs.

● CELLULAR

NUL-V-MOT-10

MOTS-C**10mg** Lyophilized · ≥99% HPLC

MOTS-C is a peptide encoded inside mitochondrial DNA — the energy-producing structures inside every cell. It activates the cell's master energy switch, which regulates how the body burns fat, responds to insulin, and manages metabolic stress.

● CELLULAR

NUL-V-MOT-20

MOTS-C**20mg** Lyophilized · ≥99% HPLC

MOTS-C at double concentration for dose-escalation metabolic studies or longer-duration protocols. Emerging as a high-interest SKU as the field of mitochondrial peptide research expands.

● CELLULAR

NUL-V-NAD-25

NAD+**250mg** Lyophilized · ≥99% HPLC

NAD+ is a coenzyme found in every living cell — essential for converting food into energy, repairing damaged DNA, and regulating aging-related proteins. Injectable NAD+ is among the highest-demand SKUs in the catalog, driven by intense interest in longevity and metabolic health research.

● CELLULAR

NUL-V-NAD-50

NAD+**500mg** Lyophilized · ≥99% HPLC

NAD+ at double concentration — preferred for high-throughput protocols, longer study durations, or customers who order regularly. Same injectable research-grade compound at a more cost-efficient size for serious buyers.

● NEURAL

NUL-V-SEL-10

Selank**10mg** Lyophilized · ≥99% HPLC

Selank is a synthetic version of tuftsin — a naturally occurring immune peptide — modified to act on the brain's calming pathways. Research shows it reduces anxiety and stress without sedation, memory impairment, or dependence risk. Also studied for supporting immune function and mental clarity.

● NEURAL

NUL-V-SEM-10

Semax**10mg** Lyophilized · ≥99% HPLC

Semax was originally developed for stroke recovery and is the most-cited nootropic peptide in preclinical research. Studied for boosting BDNF — a protein that promotes brain cell growth and repair — along with improving memory, focus, and protecting brain cells from damage.

● NEURAL

NUL-V-DSI-05

DSIP**5mg** Lyophilized · ≥99% HPLC

DSIP (Delta Sleep-Inducing Peptide) is a naturally occurring brain peptide that promotes deep, slow-wave sleep — the most restorative phase of the sleep cycle. Research also shows it modulates cortisol (the body's primary stress hormone), making it relevant to both sleep quality and stress-related hormonal imbalance studies.

● METABOLIC

NUL-V-AOD-05

AOD-9604**5mg** Lyophilized · ≥99% HPLC

AOD-9604 is a fragment of human growth hormone — specifically the portion responsible for breaking down stored fat. Unlike full growth hormone, it has no effect on blood sugar or muscle growth, making it the focus of pure fat metabolism research.

● METABOLIC **NEW**

NUL-V-AOD-10

AOD-9604**10mg** Lyophilized · ≥99% HPLC

AOD-9604 at double concentration — the fat-burning fragment of human growth hormone at higher dose for extended metabolic research or dose-escalation studies. No effect on blood sugar or muscle growth.

● METABOLIC

NUL-V-GPR-06

GLP-3 (R)**6mg** Lyophilized · ≥99% HPLC

GLP-3 (Glucagon-Like Peptide-3) is an emerging gut hormone released after eating that signals the pancreas and brain. It is the next-generation focus of metabolic research as scientists explore beyond GLP-1, studying its unique role in blood sugar regulation and gut-brain signaling.

● METABOLIC

NUL-V-GPR-12

GLP-3 (R)**12mg** Lyophilized · ≥99% HPLC

GLP-3 at double concentration for extended metabolic research or dose-response studies. Growing interest as academic and commercial labs expand research beyond the well-established GLP-1 drug class.

● METABOLIC

NUL-V-GPT-10

GLP-2 (T)**10mg** Lyophilized · ≥99% HPLC

GLP-2 (Glucagon-Like Peptide-2) is a gut-derived hormone that specifically targets the intestinal lining — stimulating its growth, strengthening the gut barrier, and improving how nutrients are absorbed. Key research areas include short bowel syndrome, inflammatory bowel conditions, and gut permeability studies.

● METABOLIC

NUL-V-GPT-20

GLP-2 (T)**20mg** Lyophilized · ≥99% HPLC

GLP-2 at double concentration for longer gut research protocols or multi-subject studies. High demand from gastroenterology research groups and gut health-focused clinics.

● METABOLIC

NUL-V-GPS-10

GLP-1 (S)**10mg** Lyophilized · ≥99% HPLC

GLP-1 (Glucagon-Like Peptide-1) is the foundational compound behind the fastest-growing drug class in history — including semaglutide and tirzepatide. Released by the gut after eating, it triggers insulin release, slows digestion, and signals the brain to reduce appetite.

● METABOLIC

GLP-1 (S)

20mg Lyophilized · ≥99% HPLC

NUL-V-GPS-20

GLP-1 at double concentration — the highest-demand SKU in the catalog. Interest in GLP-1 pathway research has surged alongside the global success of GLP-1 receptor agonist drugs. Consistent top reorder across all customer segments.
